Olympic village

The basis of man-made island

Basically I used the mega float theory in this project. Mega float is a floating big scale structure, thus I produce many big rectangle block that are connected with each other. Each of them is anchored by fixed pile. The advantage of mega float are, we don't have to use land, we can use the sea without considering about ground or the depth of water, it doesn't affect much the environment, it has the earthquake proof ability, the construction time needed to make the island is short, we can migrate the island freely, we can use the internal space, we can build many heavy structure on it without many problems, and many more.

Contents of facilities

In Tokyo, if there is an Olympic event being held, the

Japan style

ground for the Olympic village is none or limited. Thus I want to propose that the limited land be compensated to the man-made island. We can build a new main stadium, Olympic village, and hotels on the island.

Sustainable plan

We also can see other things besides Olympic, for example when an Olympic event is finished, we can reuse the Olympic ground for other purposes. For example, we can change the Olympic village to apartments for sale, hotels, and many more. Then the main stadium can be used by the J-league soccer team, let's say the Tokyo football club soccer team for their home stadium.

Access

The island can be accessed by ship and underwater train. The ship and underwater train also can be used for other purposes. For example, during the opening of the Olympic event, the people who are staying in the main island hotel can overlook the scenery of the sea, main stadium, skytree, and many more. The night scenery will be good also.

Furthermore, they also can enjoy sightseeing during the day. For example, if they go to Tokyo Disneyland by using the ship at 10 o'clock in the morning, the 20 minutes approximately time needed for the travel will not be felt, because of the beautiful scenery of the sea. Then when they return to the hotel, they can use the underwater train and enjoy the beautiful and gorgeous scene of the underwater world.
